This SOW includes ABC's recommendations for scope and is subject to change pursuant to a written amendment based on mutually agreeable changes in scope and executed by both Company and ABC. Capitalized terms used herein but not defined herein shall have the meanings ascribed to them in the Agreement. In the event of any conflict between the terms of this SOW and the Agreement, the terms and conditions of this SOW shall govern and control.

1. Background

About ABC

Systems Evolution, Inc. (ABC) is a boutique business and technology consulting firm focused on delivering superior value to clients since 1992. Based across twelve cities nationally, we provide the agility, consistency and personal attention of a local partner while providing the reach and knowledge assets of a national organization. ABC is consistently recognized as a top consulting firm by numerous publications such as Consulting Magazine's, "Best Large Firms to Work For". We employ over 600 consultants nationally, all of whom bring seasoned experience across a variety of industries, functional areas, and service offerings, including significant transformation leadership and successful execution in the hospitality industry.

Collective Value Delivery Model

ABC's delivery model is based on engaging senior-level consultants in key leadership positions to provide project, process, and technical leadership for client engagements. Unlike the traditional consulting model consisting of large teams, ABC deploys individual consultants or small teams who can leverage the combined experience and intellectual capital of our entire organization. This collaborative model, which we refer to as "Collective Value" provides our clients with reach-back capabilities of our national consultant base, while providing the flexibility, personal attention, and lower cost of a local, dedicated team. Our Collective Value delivery model gives clients access to a comprehensive set of skills and experiences without having

to engage a large team of specialized resources. More information on ABC's Collective Value is available upon request.

2. Our Understanding

Company is transitioning to a new global telephony platform to improve agility, scalability, and customer experience while reducing cost and operational complexity. The platform will need to meet fluctuating call volumes with built-in resiliency, global reach, and high availability to improve service continuity and support distributed or remote workforces. Advanced analytics and AI-driven value add services will be an important part of the implementation along with omnichannel capabilities to enhance agent productivity and provide deeper insight into customer behavior. The successful implementation of the new telephony platform will ultimately allow the company to focus more on customer outcomes and less on managing telephony infrastructure.

Company is seeking support with the program management activities for this initiative to ensure adoption and program success.

The role will interface with business stakeholders, IT architecture, senior leadership and vendors. Program wide leadership and execution will be critical to the success of the role.

3. Assumptions

Company will make key resources (Subject Matter Experts or other personnel as required, equipment, hardware, systems and information) available as necessary to enable successful completion of work.

4. Services/Work to be Performed

The focus of this SOW is to provide consulting and project management services to support the Company. Below is a layout of responsibilities and activities that ABC consultants typically perform in this role. As the needs of the program evolve, the below information may be updated to reflect any change in strategic direction and ensure program success.

During this period of performance, ABC's responsibilities and associated activities will primarily include the following (collectively, the "**Services**"):

- Communicate with senior management and relevant stakeholders across the organization on program or project status, timeline, risks, and issues; provide comprehensive documentation, as needed
- Coordinate preparation for and help lead Product Increment (PI) planning activities for the Program
- Lead Program level ceremonies (e.g. Scrum of Scrums, System Demos, Problem Solving Workshops)
- Actively manage Program level Risks and Dependencies

- Coordinate and align with the Product team around delivery against the overall Product Roadmap (or Program Plan)
- Act as "Servant Leader" to Program teams, providing guidance on Agile best practice and assist in removing impediments to delivery
